Automation, fauxtimation, and the future of work

Digital platform labor and the globalisation of AI

Antonio A. Casilli

A pandemic in the era of digital platforms

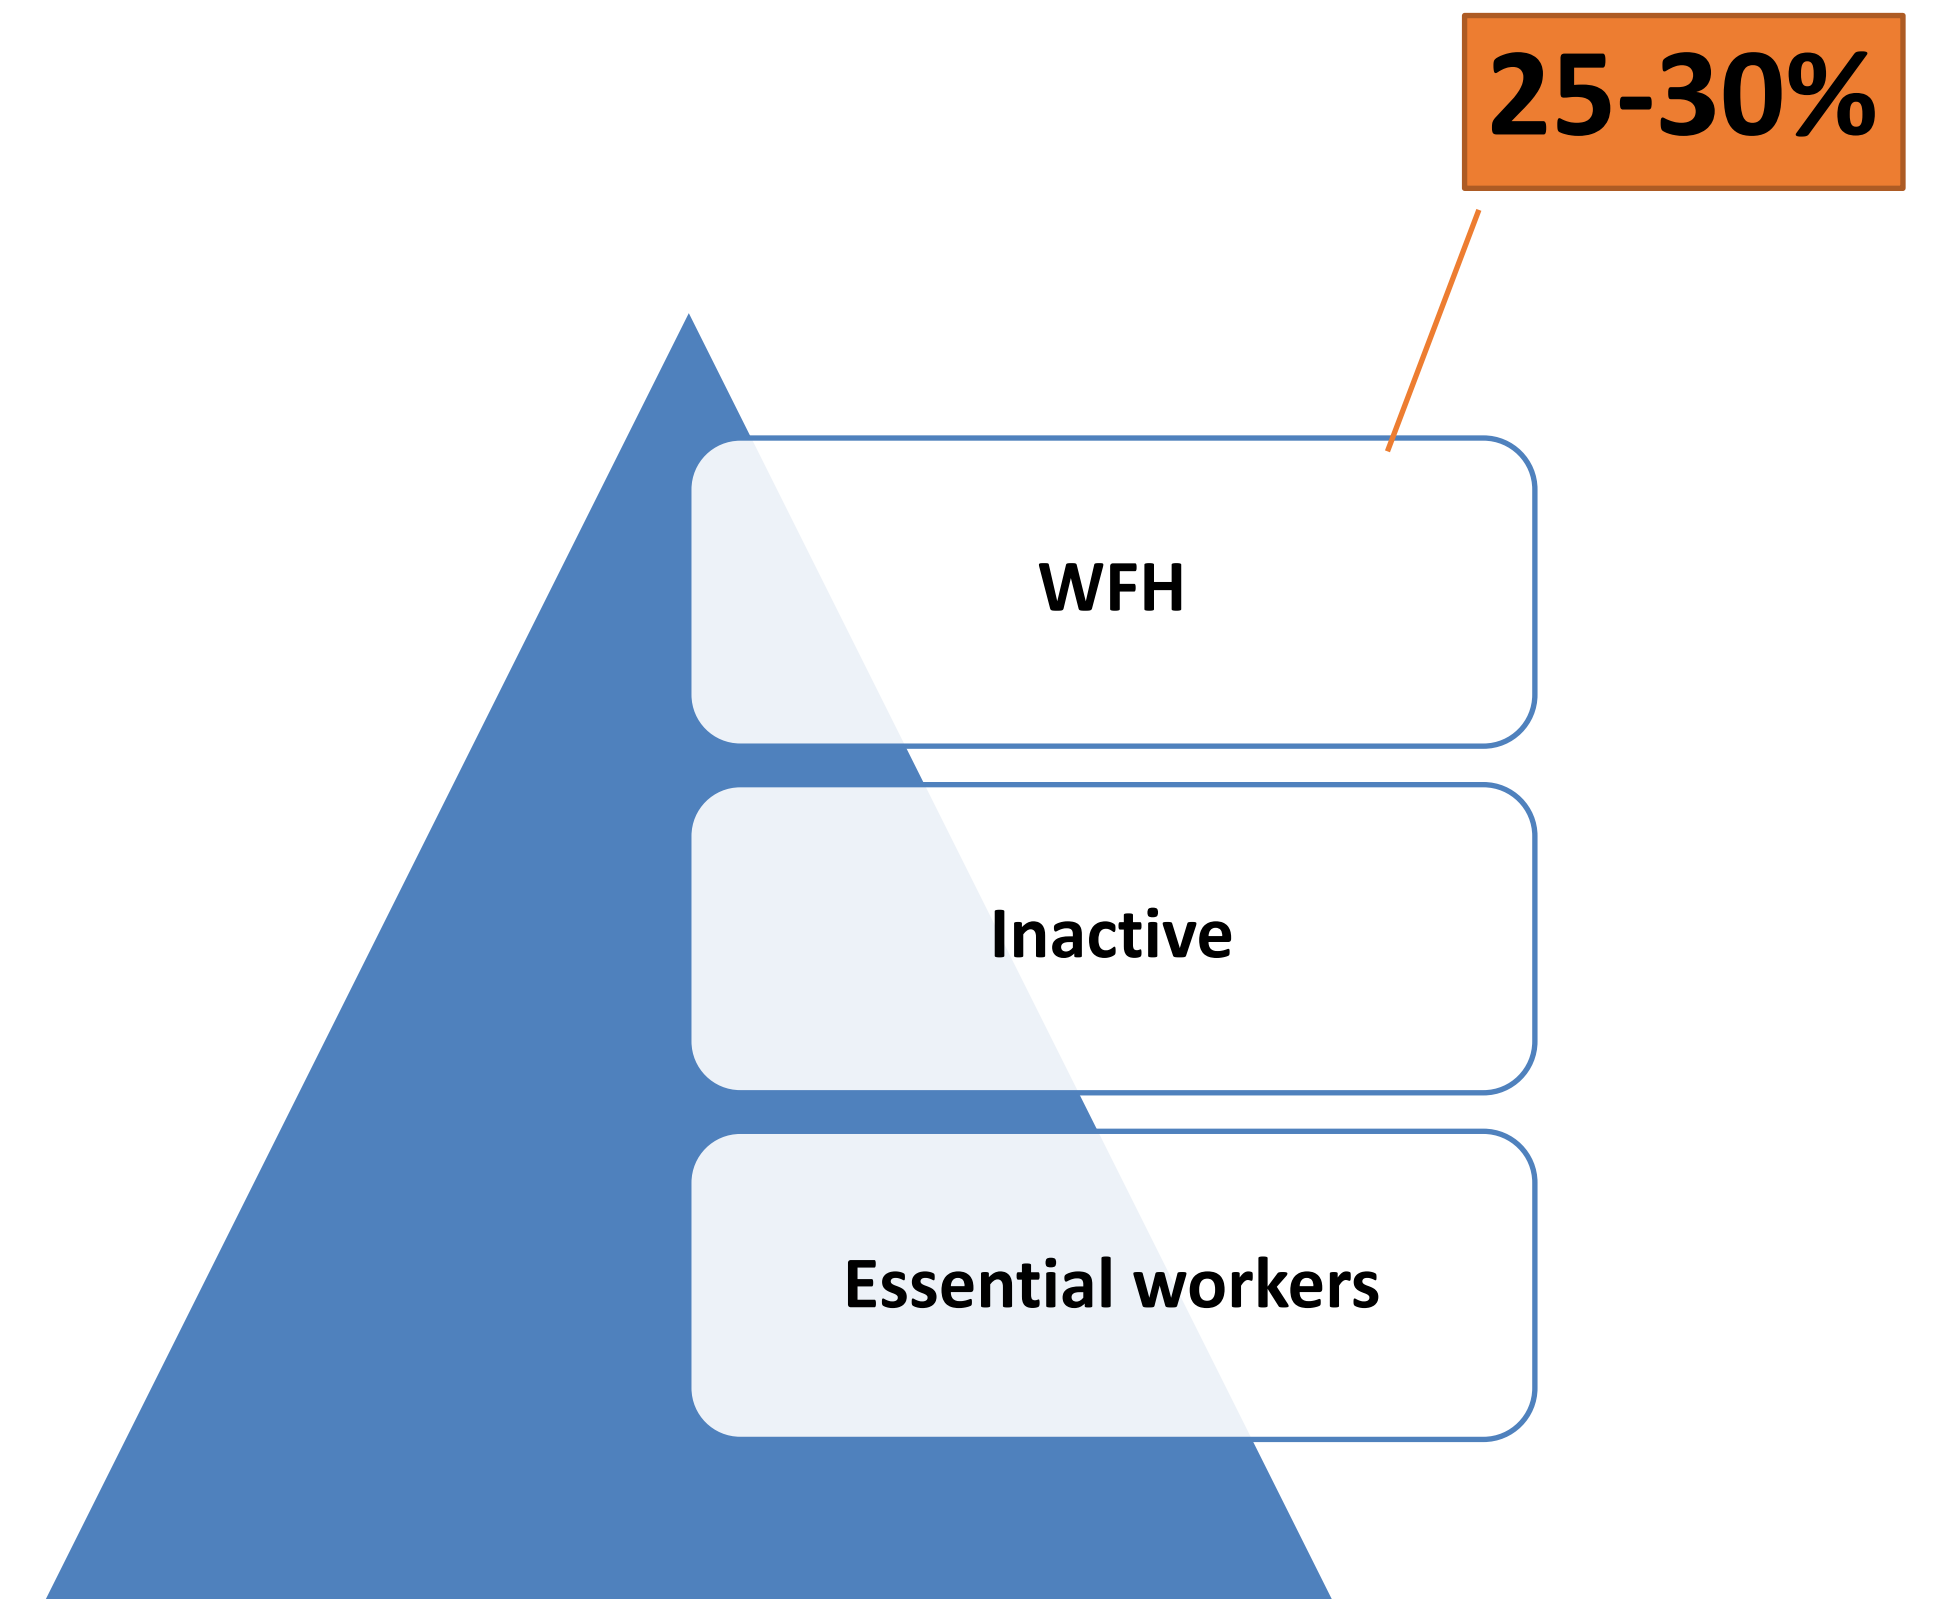

- Covid-19 and the triumph of platforms
- Work from home and the “social distancing of work”
- An opportunity to automate?
- The Future of Employment (2013): 47% of jobs gone by 2030?

Carl Benedkt Frey says increasing automation is likely in the wake of the pandemic © FT montage; Getty Images

Fragmentation of the labour market

- "Grand work from home experiment" (ILO)
- Accessible especially to the most privileged socio-professional categories with
 - good equipment and connectivity
 - good housing
 - no household and care chores
- Essential jobs remain face-to-face

The weight of global interdependencies

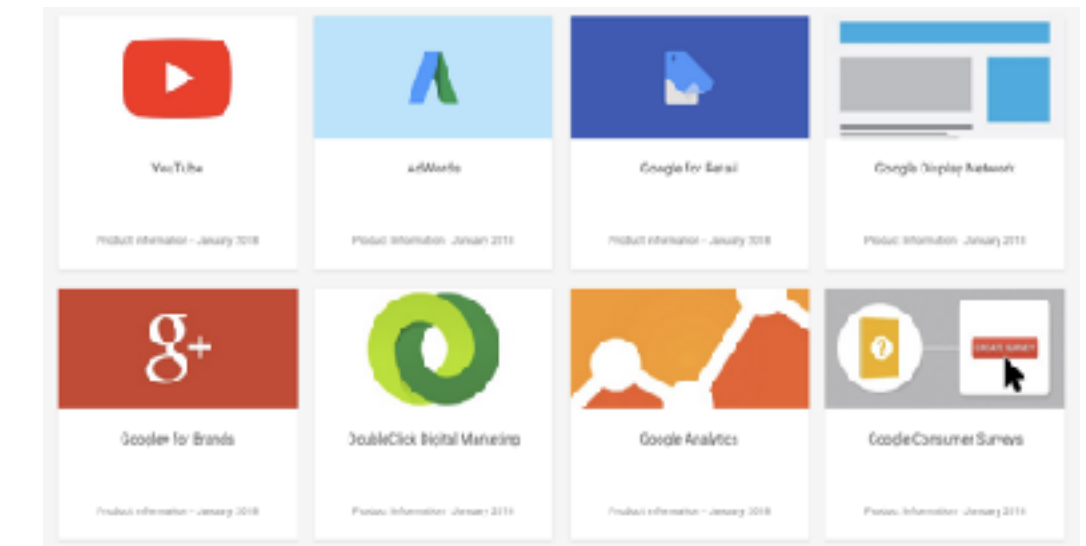

- Increased visibility of local logistics
- Increased visibility of global logistics
- Disruption of global supply networks
- Role of data infrastructures

March 2021 - Ever Given container ship blocks the Suez Canal for six days

Platformisation

- Market/company hybrids
- Productive ecosystems
- Multi-sided markets
- Algorithmic matching systems
- Models that focus on value (and mainly data) capture
- Data-intensive automation

Get Results from Mechanical Turk Workers

Ask workers to complete HITs - *Human Intelligence Tasks* - and get results using Mechanical Turk. [Register Now](#)

As a Mechanical Turk Requester you:

- Have access to a global, on-demand, 24 x 7 workforce
- Get thousands of HITs completed in minutes
- Pay only when you're satisfied with the results

Make Money by working on HITs

HITs - *Human Intelligence Tasks* - are individual tasks that you work on. [Find HITs now.](#)

As a Mechanical Turk Worker you:

- Can work from home
- Choose your own work hours
- Get paid for doing good work

Timer: 00:00:00 of 60 minutes

Want to work on this HIT?

How many people micro-work online?

Counting 'micro-workers': societal and methodological challenges around new forms of labour

Paola Tubaro, Clément Le Ludec and Antonio A. Casilli

Paola Tubaro is an Associate Research Professor in the Laboratory of Research in Informatics at CNRS / Université Paris-Saclay / Inria, France.

Clément Le Ludec is a PhD student at the Interdisciplinary Institute for Innovation (i3) in Telecom Paris at the Institut Polytechnique de Paris, France.

Antonio A. Casilli is a Professor in the Interdisciplinary Institute for Innovation (i3), in Telecom Paris, at the Institut Polytechnique de Paris, France.

ABSTRACT

'Micro-work' consists of fragmented data tasks that myriad providers execute on online platforms. While crucial to the development of data-based technologies, this poorly visible and geographically spread activity is particularly difficult to measure. To fill this gap, we combined qualitative and quantitative methods (online surveys, in-depth interviews, capture-recapture techniques and web traffic analytics) to count micro-workers in a single country, France. On the basis of this analysis, we estimate that approximately 260,000 people are registered with micro-work platforms. Of these, some 50,000 are 'regular' workers who do micro-tasks at least monthly and we speculate that using a more restrictive measure of 'very active' workers decreases this figure to 15,000. This analysis contributes to research on platform labour and the labour in the digital economy that lies behind artificial intelligence.

KEY WORDS

micro-work, digital platforms, labour statistics

Introduction

Micro-work is the most elusive form of labour in the digital economy. Specialised platforms like Amazon Mechanical Turk 'unbundle' (Pesole, Urzi-Brancati, Fernández-Macías & González-Vázquez, 2018) larger work packages into tiny 'tasks' that they

How Many Online Workers are there in the World? A Data-Driven Assessment

ABSTRACT

An unknown number of people around the world are earning income by working through online labour platforms such as Upwork and Amazon Mechanical Turk. We combine data collected from various sources to build a data-driven assessment of the number of such online workers (also known as online freelancers) globally. Our headline estimate is that there are 163 million freelancer profiles registered on online labour platforms globally. Approximately 19 million of them have obtained work through the platform at least once, and 5 million have completed at least 10 projects or earned at least \$1000. These numbers suggest a substantial growth from 2015 in registered worker accounts, but much less growth in amount of work completed by workers. Our results indicate that online freelancing represents a non-trivial segment of labour today, but one that is spread thinly across countries and sectors.

JEL classification: F6, F16, J24, J31, L14, O15, O32

Keywords: Platform Economy, Online Labour Markets

1 Introduction

Development in digital communication technologies has made transacting work remotely far easier and more economical. At the forefront of this phenomenon are so-called online labour platforms, also known as online outsourcing, crowdwork, or online gig platforms. They allow workers to serve multiple clients at varying hours remotely from their homes or co-working spaces instead of working full-time for a single employer. In this short paper, we refer to the phenomenon as online freelancing, though the employment status of platform-based work is in some cases contested.

Current economic statistics are not well suited to measuring the online freelance economy, in terms of both capturing its full extent as well as distinguishing its impact from other activities (Abraham et al. 2017). Kässi and Lehdonvirta (2018) give several reasons for this: the standard definition of employment is someone who has done at least one hour in the tracking period.

AI production and international
arbitrage of digital labour

Three contributions of human digital labour to AI

AI preparation

- "Box a tomato. We have the image of a dish and we are told to "draw a box around a tomato", we don't know why, everyone knows what a tomato is, I hope... Afterwards, if it's there, I think it must be useful to someone for something, but... Why, I don't know."

T., 45, 2017

AI preparation

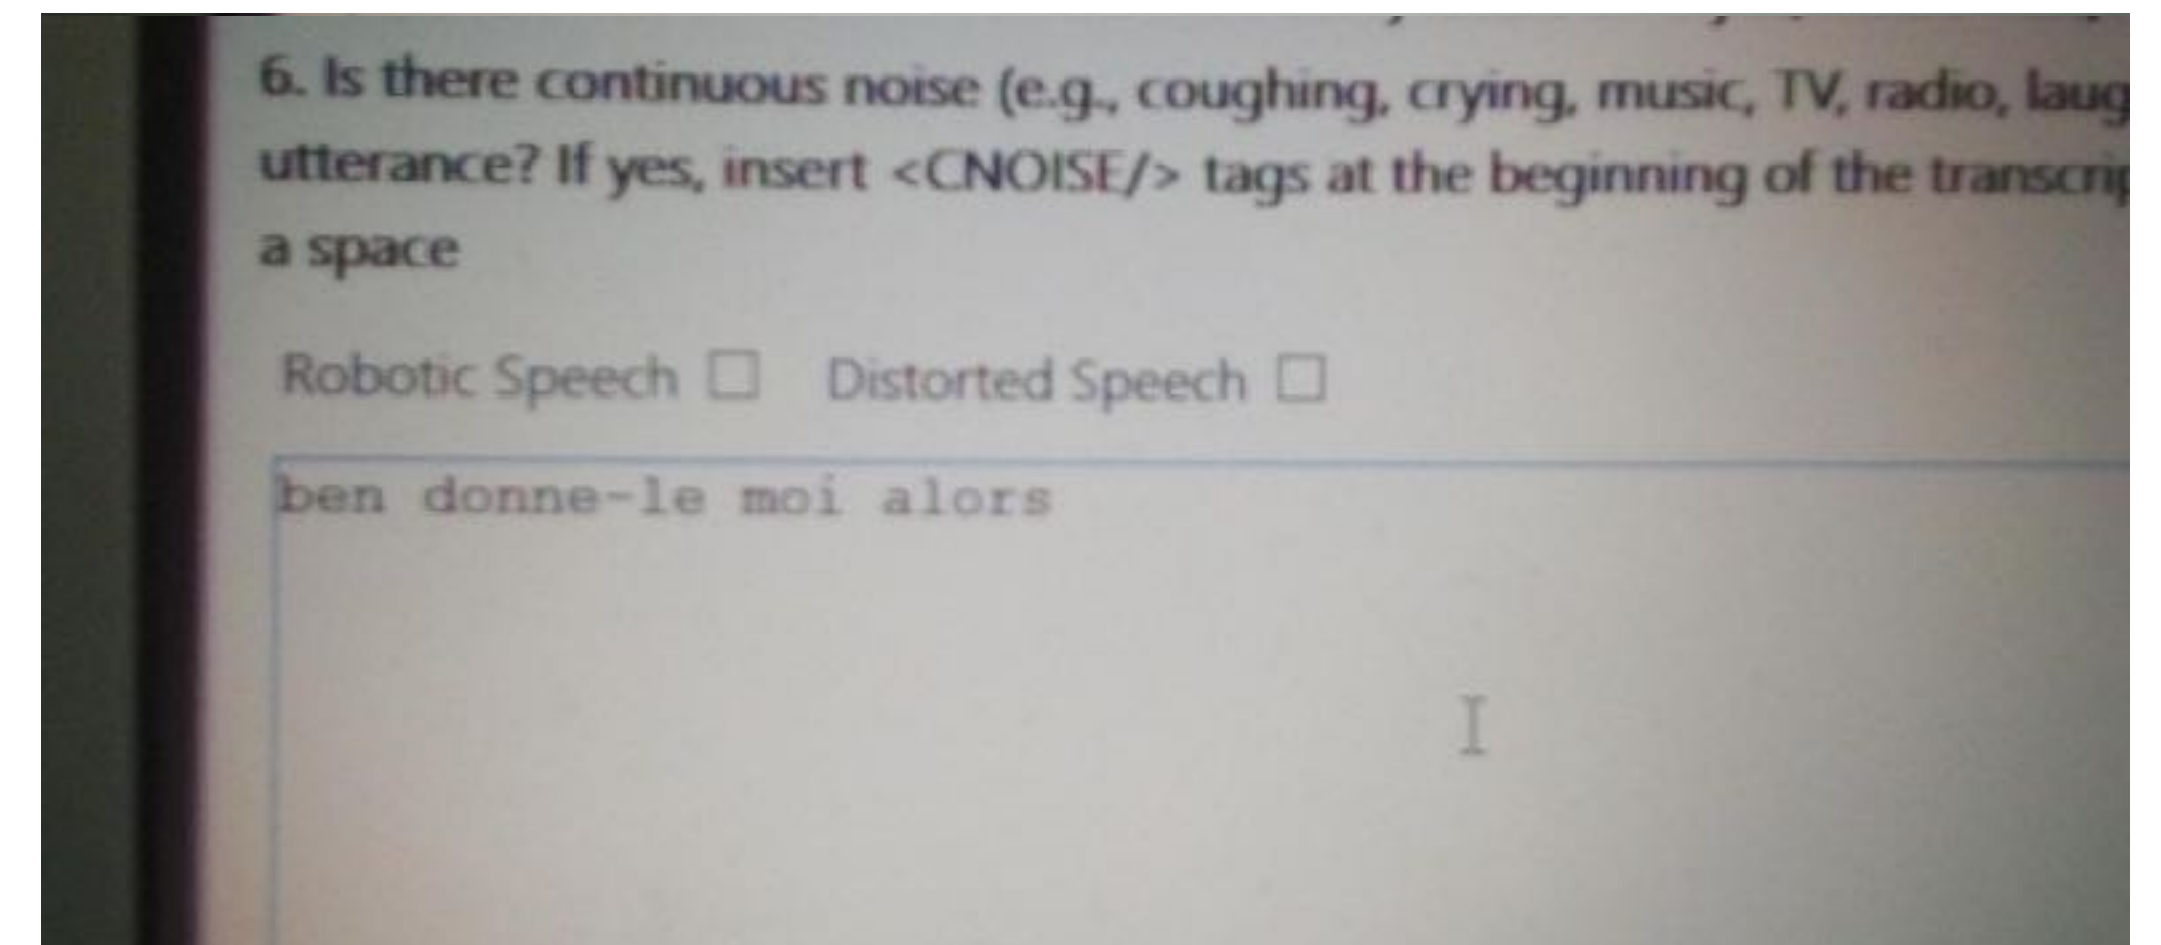

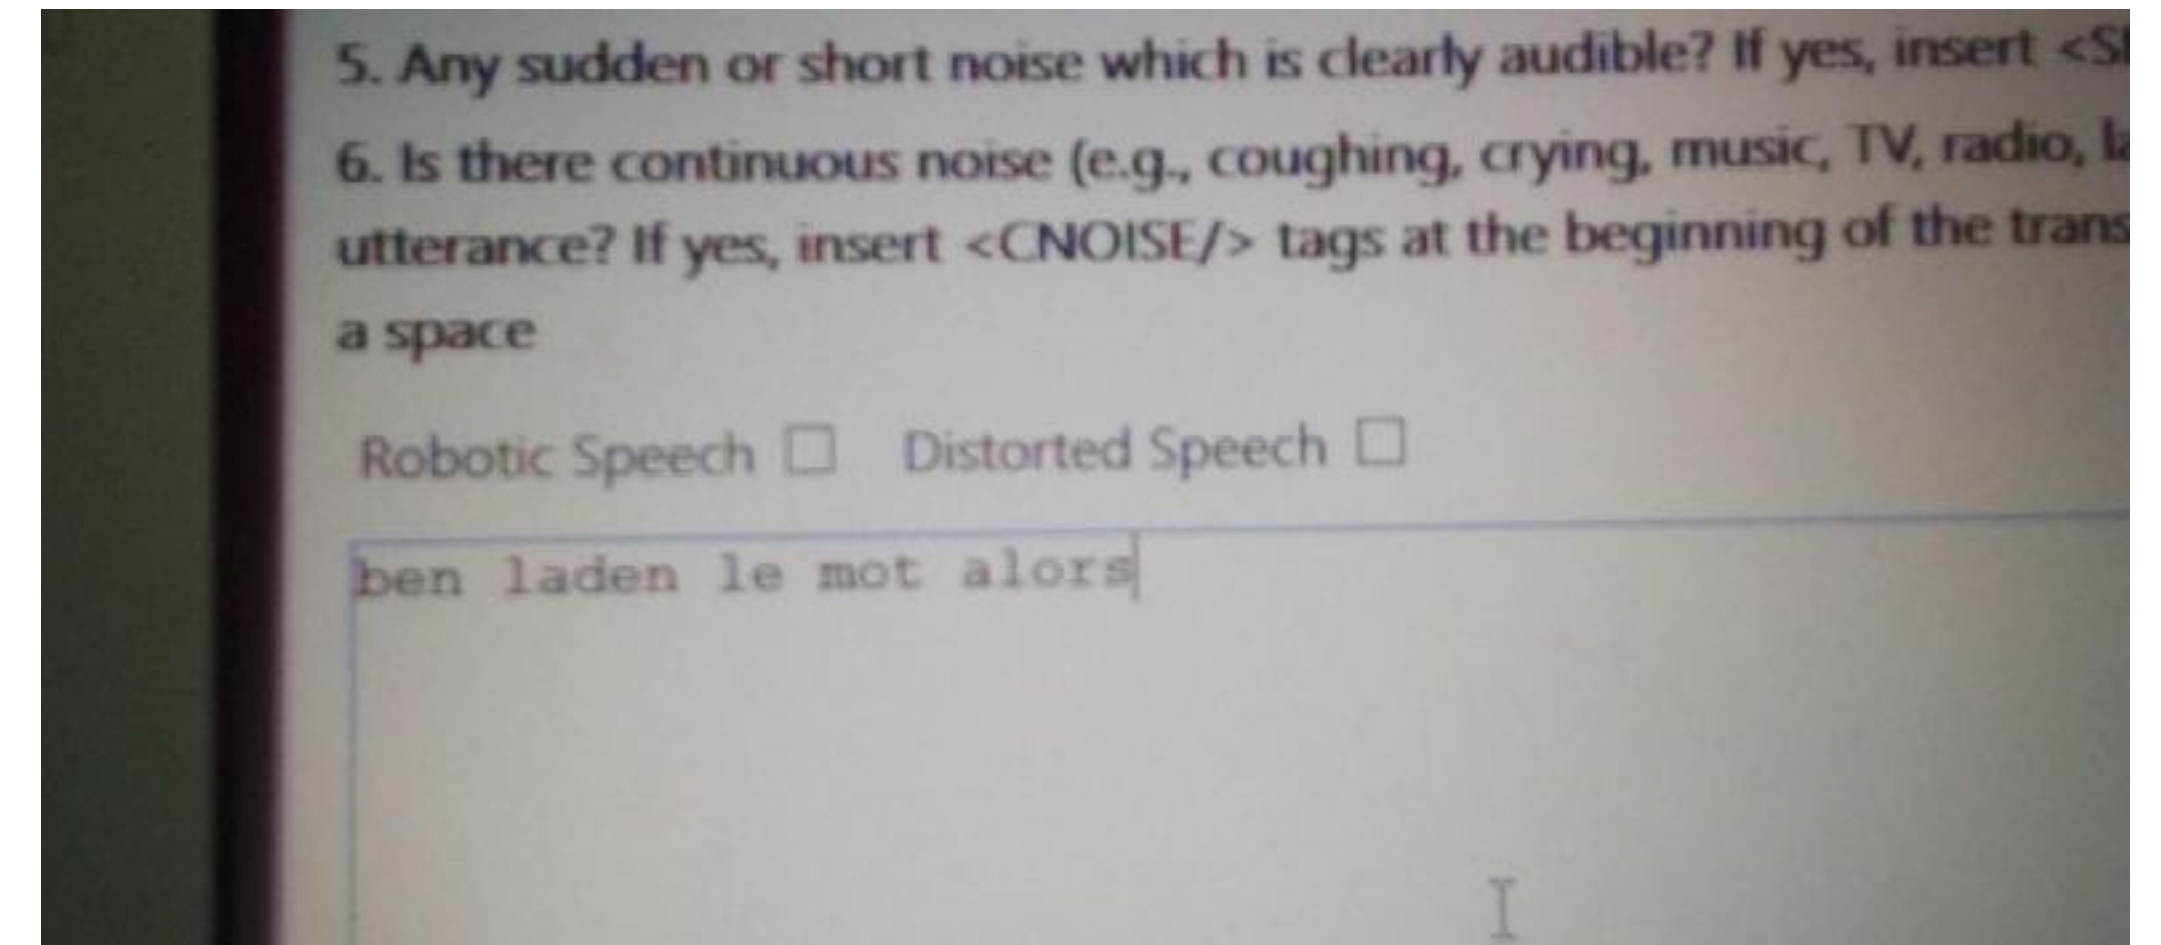

- Principal employer's country
- Subcontractors' country
- ➔ Data and labor flow

AI verification

- "Transcribers would log on, and listen to the recordings one by one. The tracks were usually very short, 3 to 15 seconds on average, but could sometimes be several minutes long. Depending on the project we were working on, we would do between 120 and 170 transcriptions per hour..."

J., 26, 2018

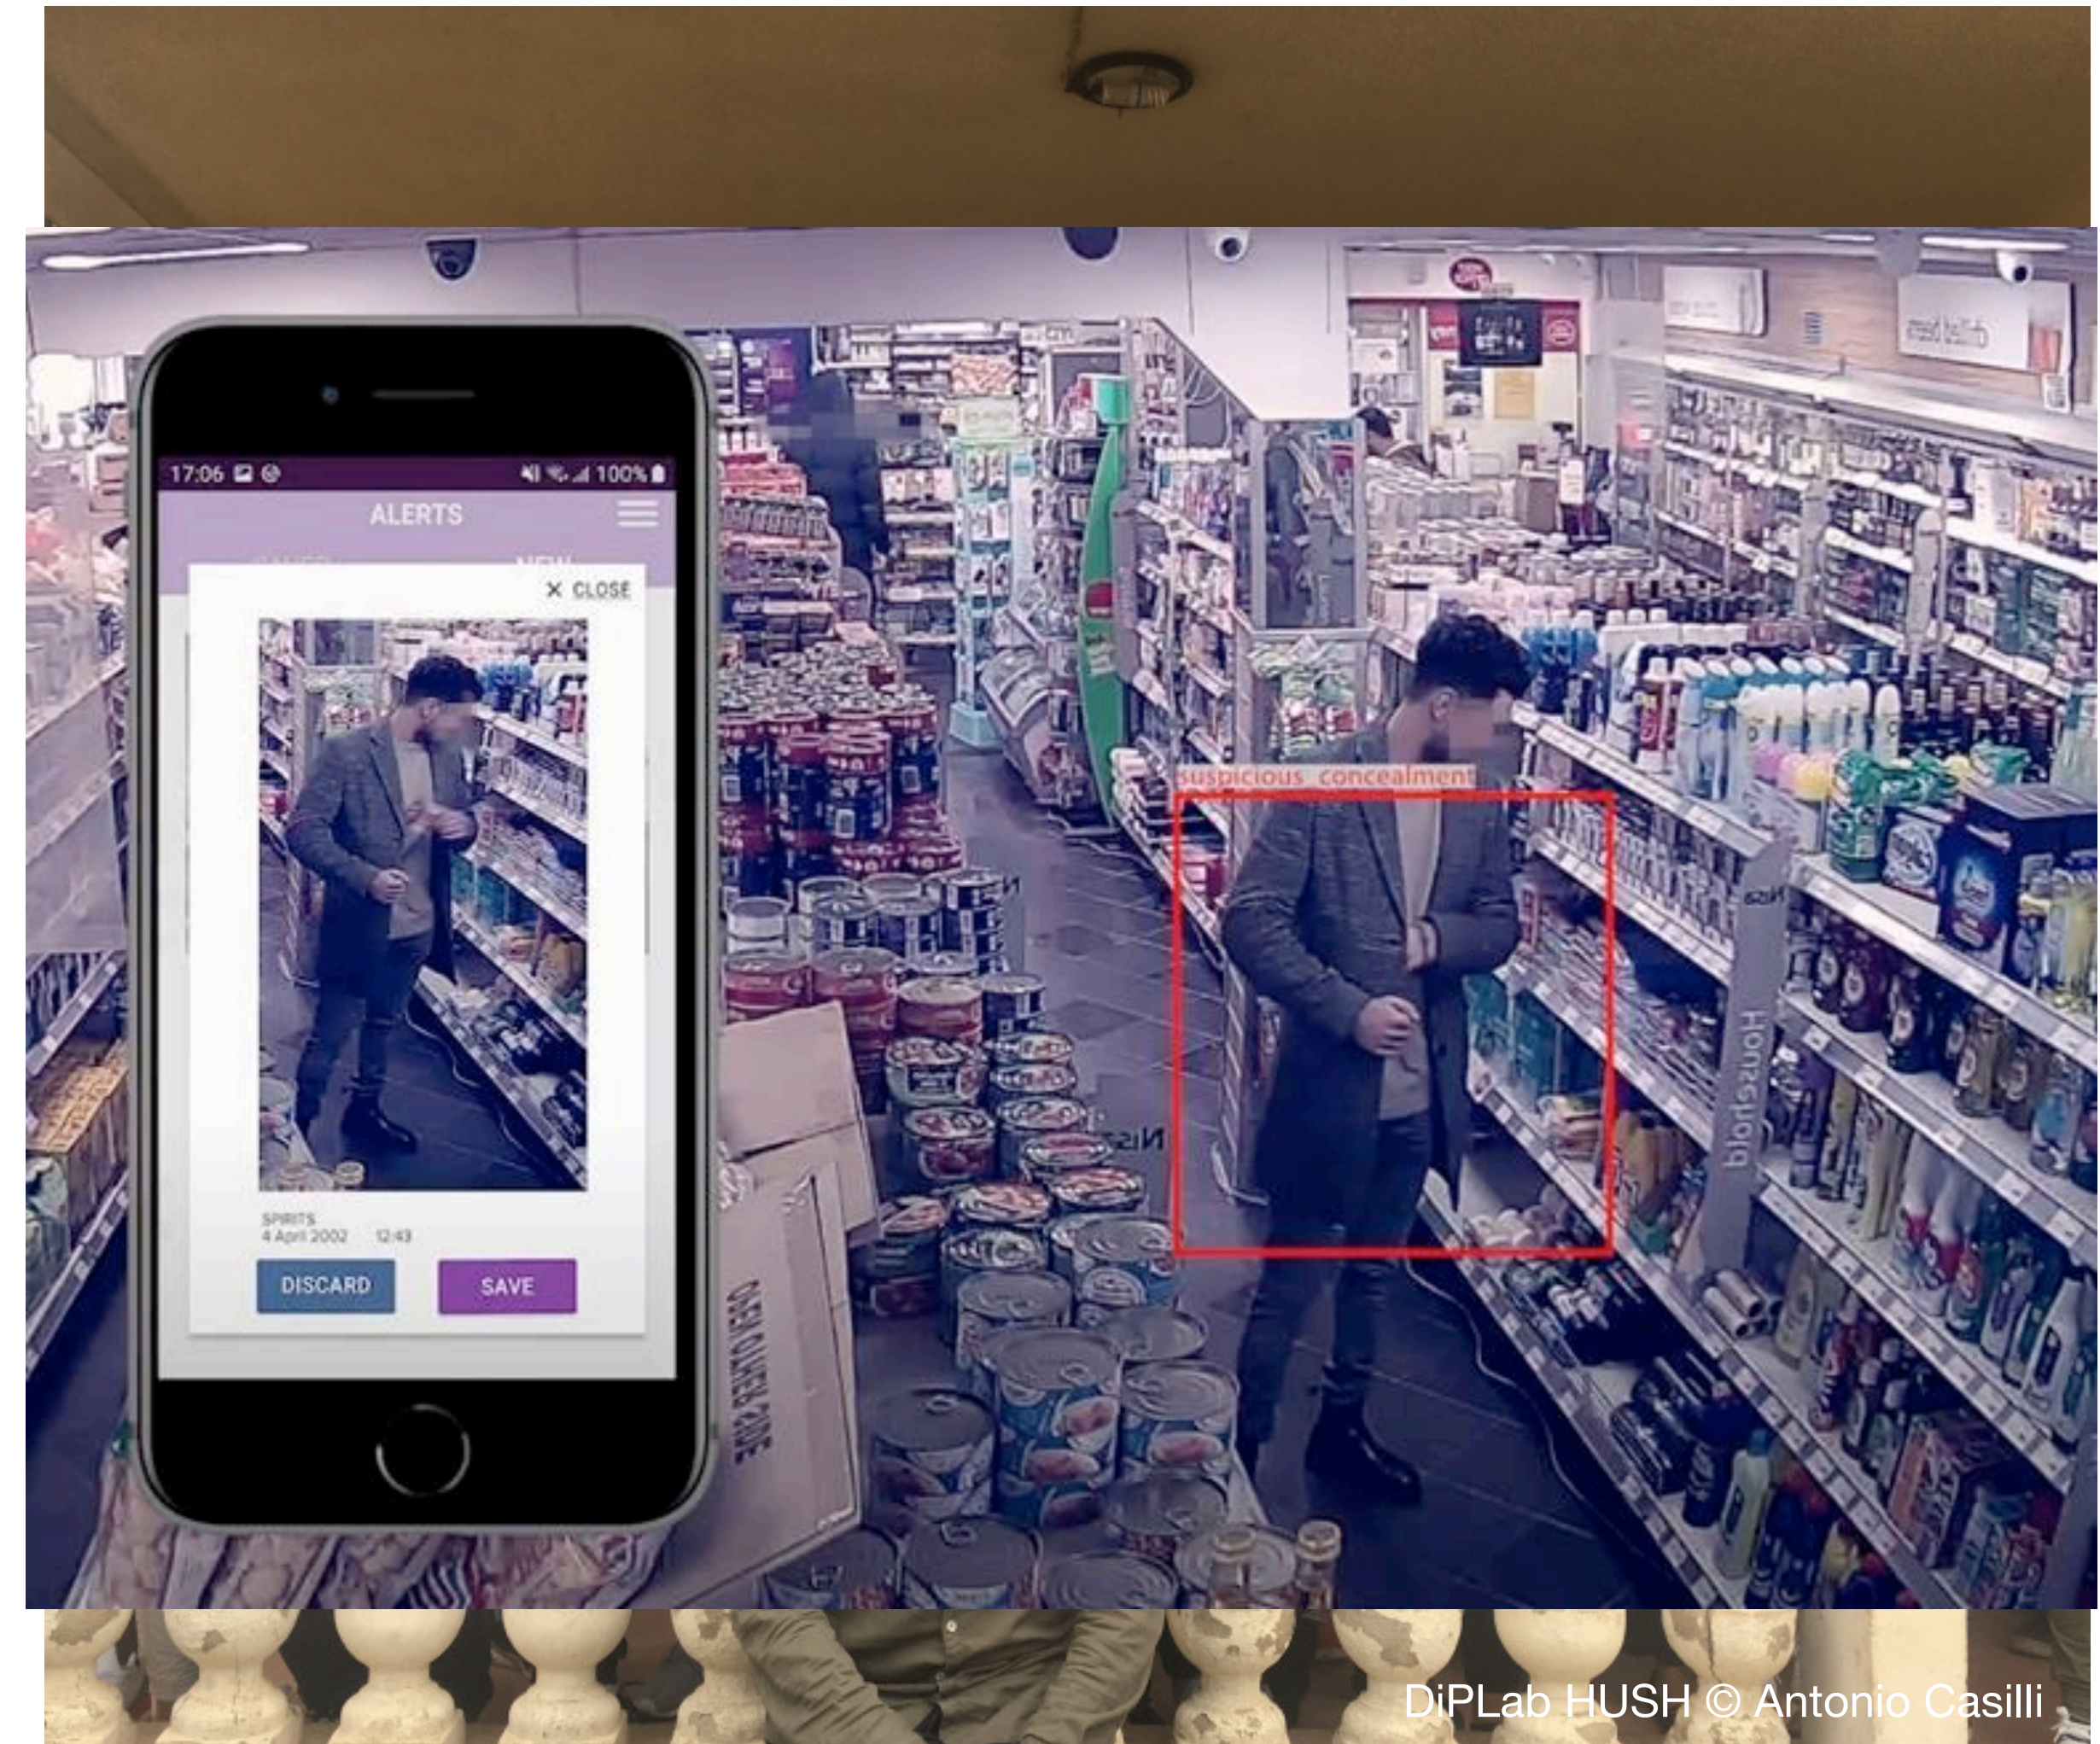

AI verification

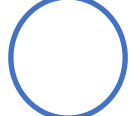

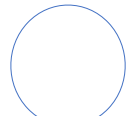

AI impersonation

- “People do not realise that the vast majority of B2B startups [that produce AI solutions] are human-based (...) But I empathise, because what they do is a bet on the future. They have to create their own data (...) and then implement machine learning and then hope that— one of these days—the process will be automated.”

K., 42 yo, 2018

AI impersonation

-  Principal employer's country
-  Subcontractors' country
-  Data and labor flow

Fauxtimation is not a bug of AI.
It's a feature.

Alphabet

 Meta

 Microsoft

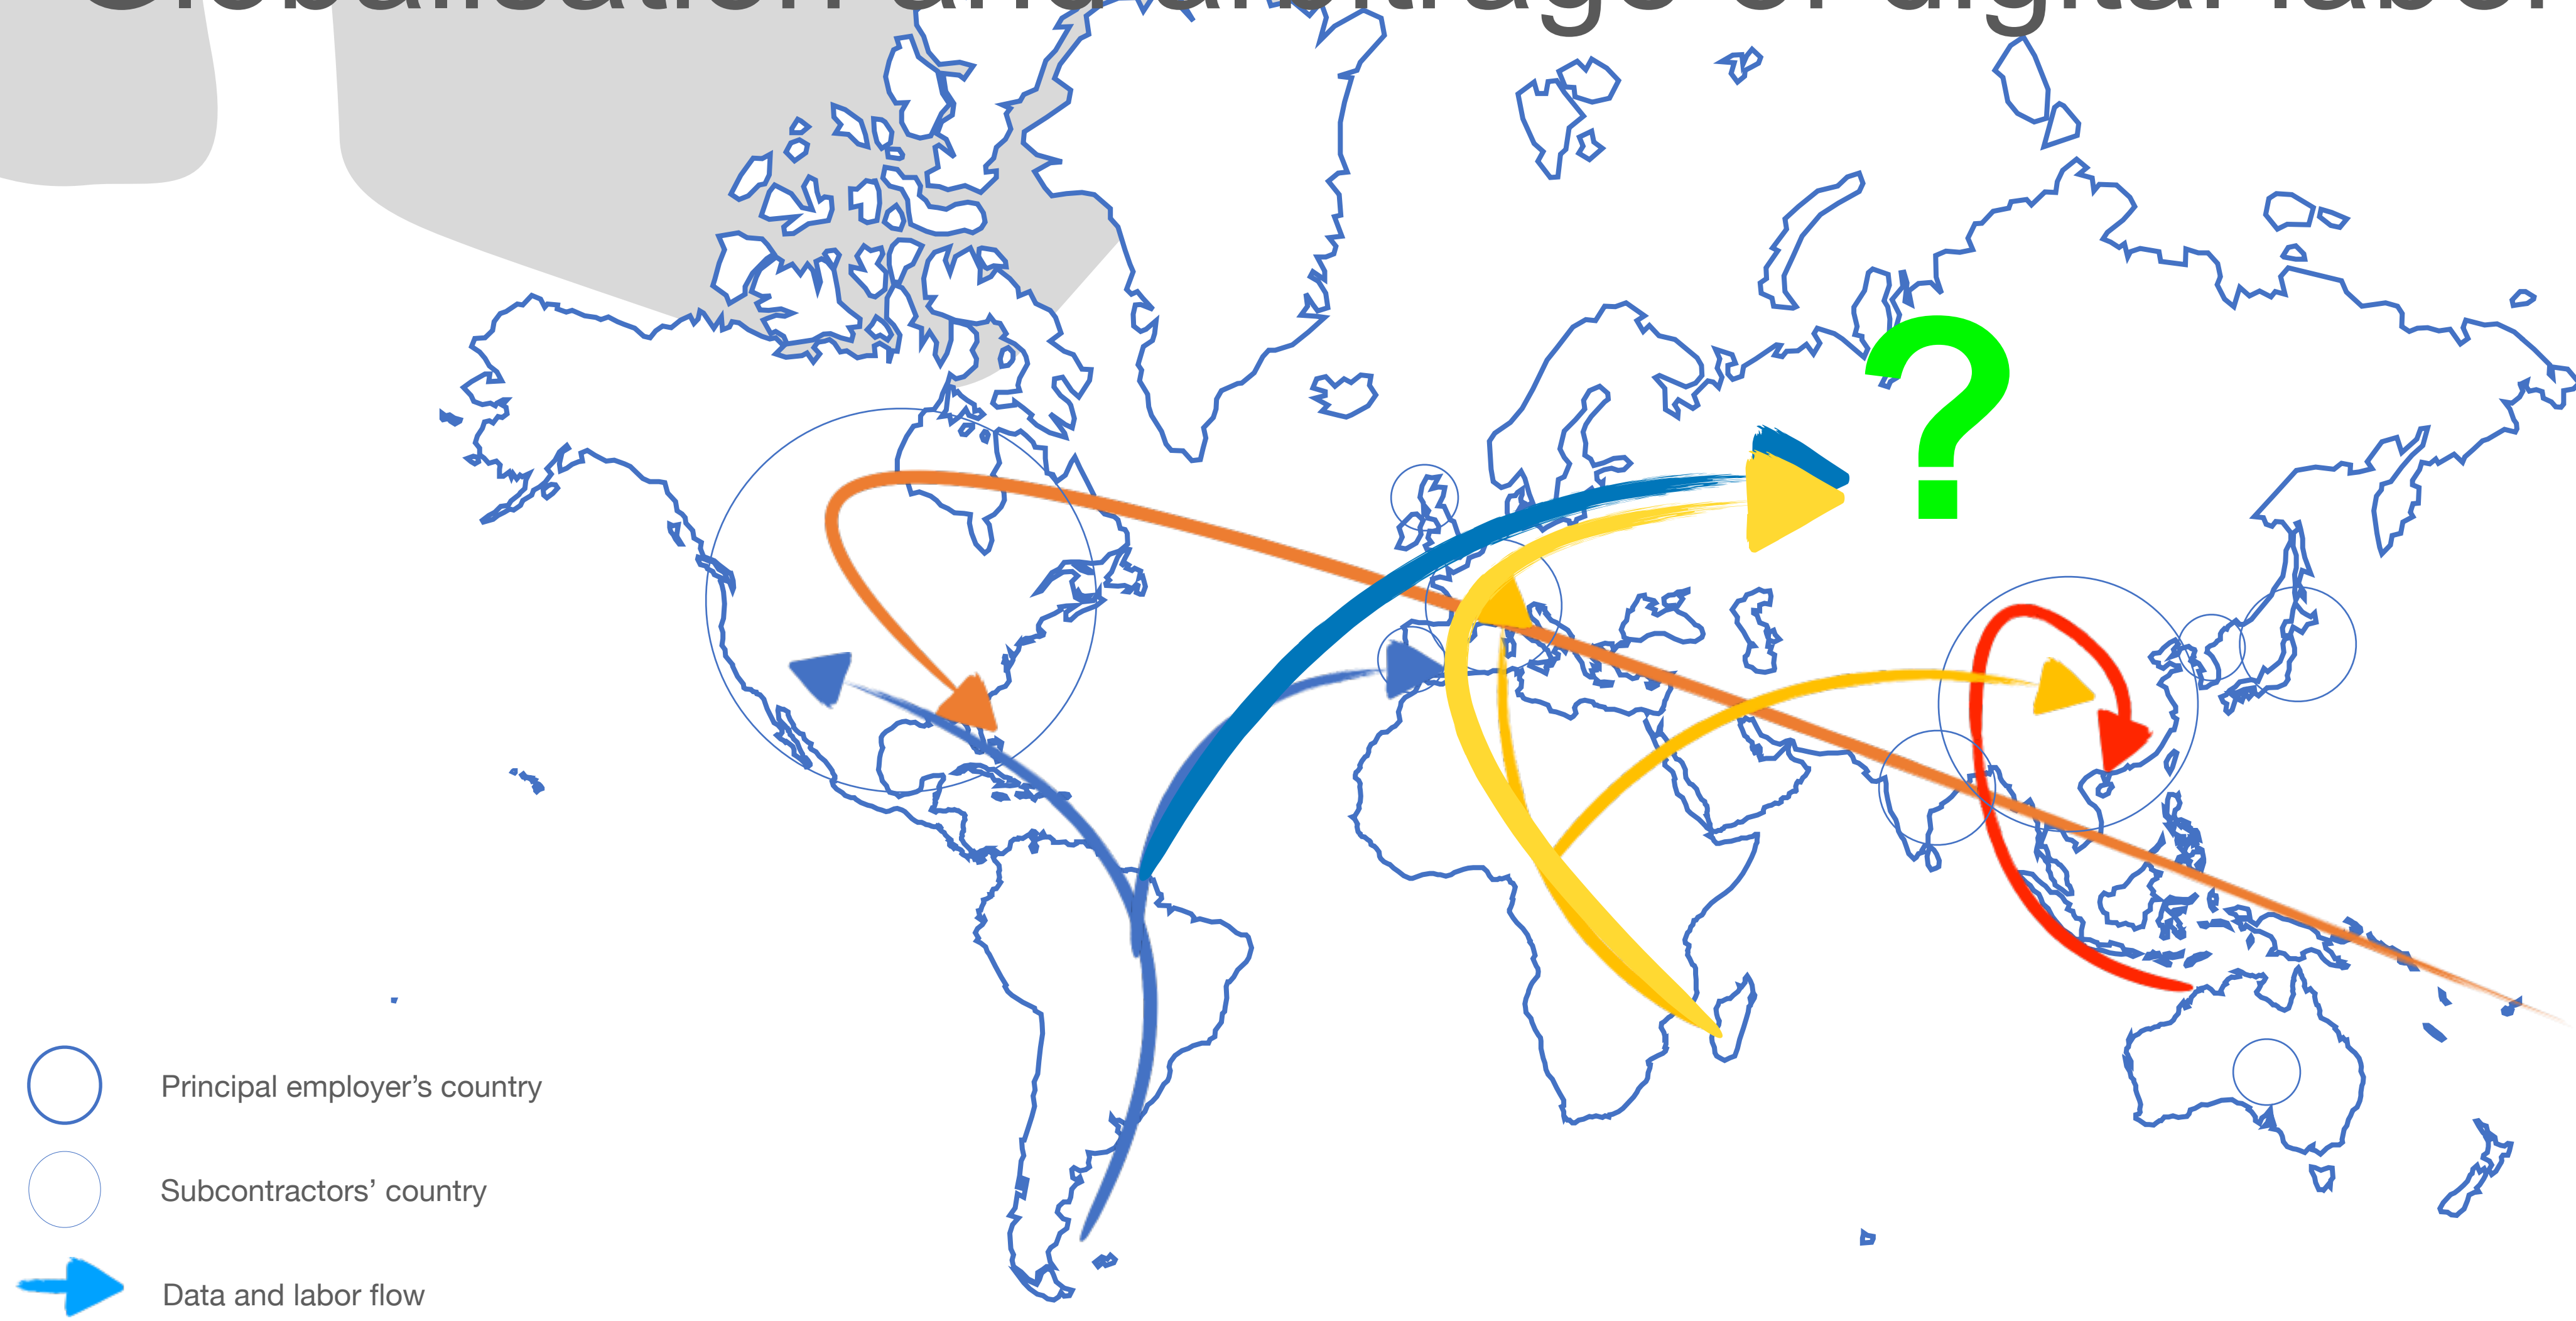

For a labour-saving technology, sure it takes a lot of labour to manufacture AI
