

# AI-based tools for the public service

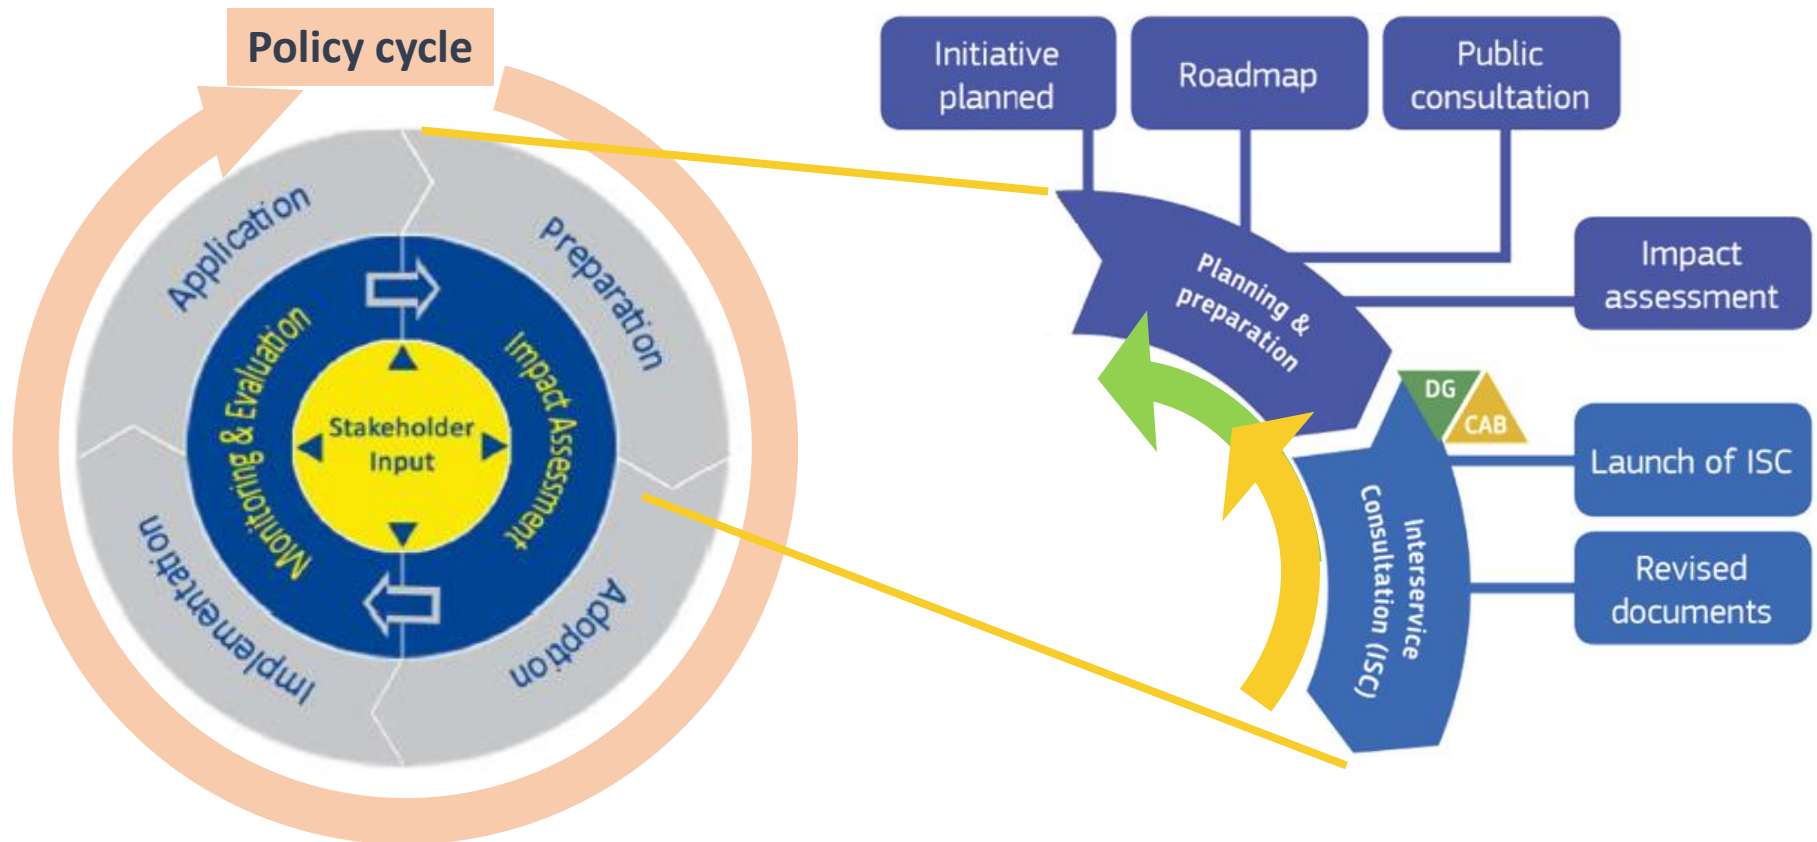

*in practice*

Franco Accordino, Monika Lanzenberger

@3rd ACM Digital Humanism Summer School  
Vienna, 2 September 2024

As a brief introduction...

# Policy making within the European Commission

- Ensure EU policymaking is based on evidence
- Making EU laws simpler and better, and avoiding unnecessary burdens
- Involving citizens, businesses and stakeholders in the decision-making process

# Typical policy making tasks and constraints

- Ex-post evaluation of an existing legislative act or entire policy area, measuring the actual impact the legislation had in economic, societal and sustainability terms.
- Ex-ante impact assessment requires a market analysis with identification of trends, their enablers and barriers, and options for policy decisions
- Meeting with stakeholders require briefings (line to take, defensives, etc), summary reports (for transparency or follow up reasons),
- Conducting consultations and gathering opinions and evidence from structured dialogues with stakeholders, including Member States
- Constraints:
  - Multi-lingual challenge,
  - Sensitive political questions with critical time-to-reply constraints
  - Legal compliance and consistency to EU and national law
  - Confidentiality vs. transparency and engagement
- ....

# How to engage with the community?

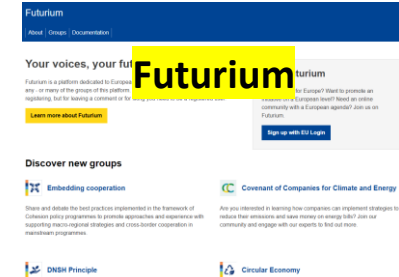

## Dedicated platforms

## Structured consultations

## Social media - type

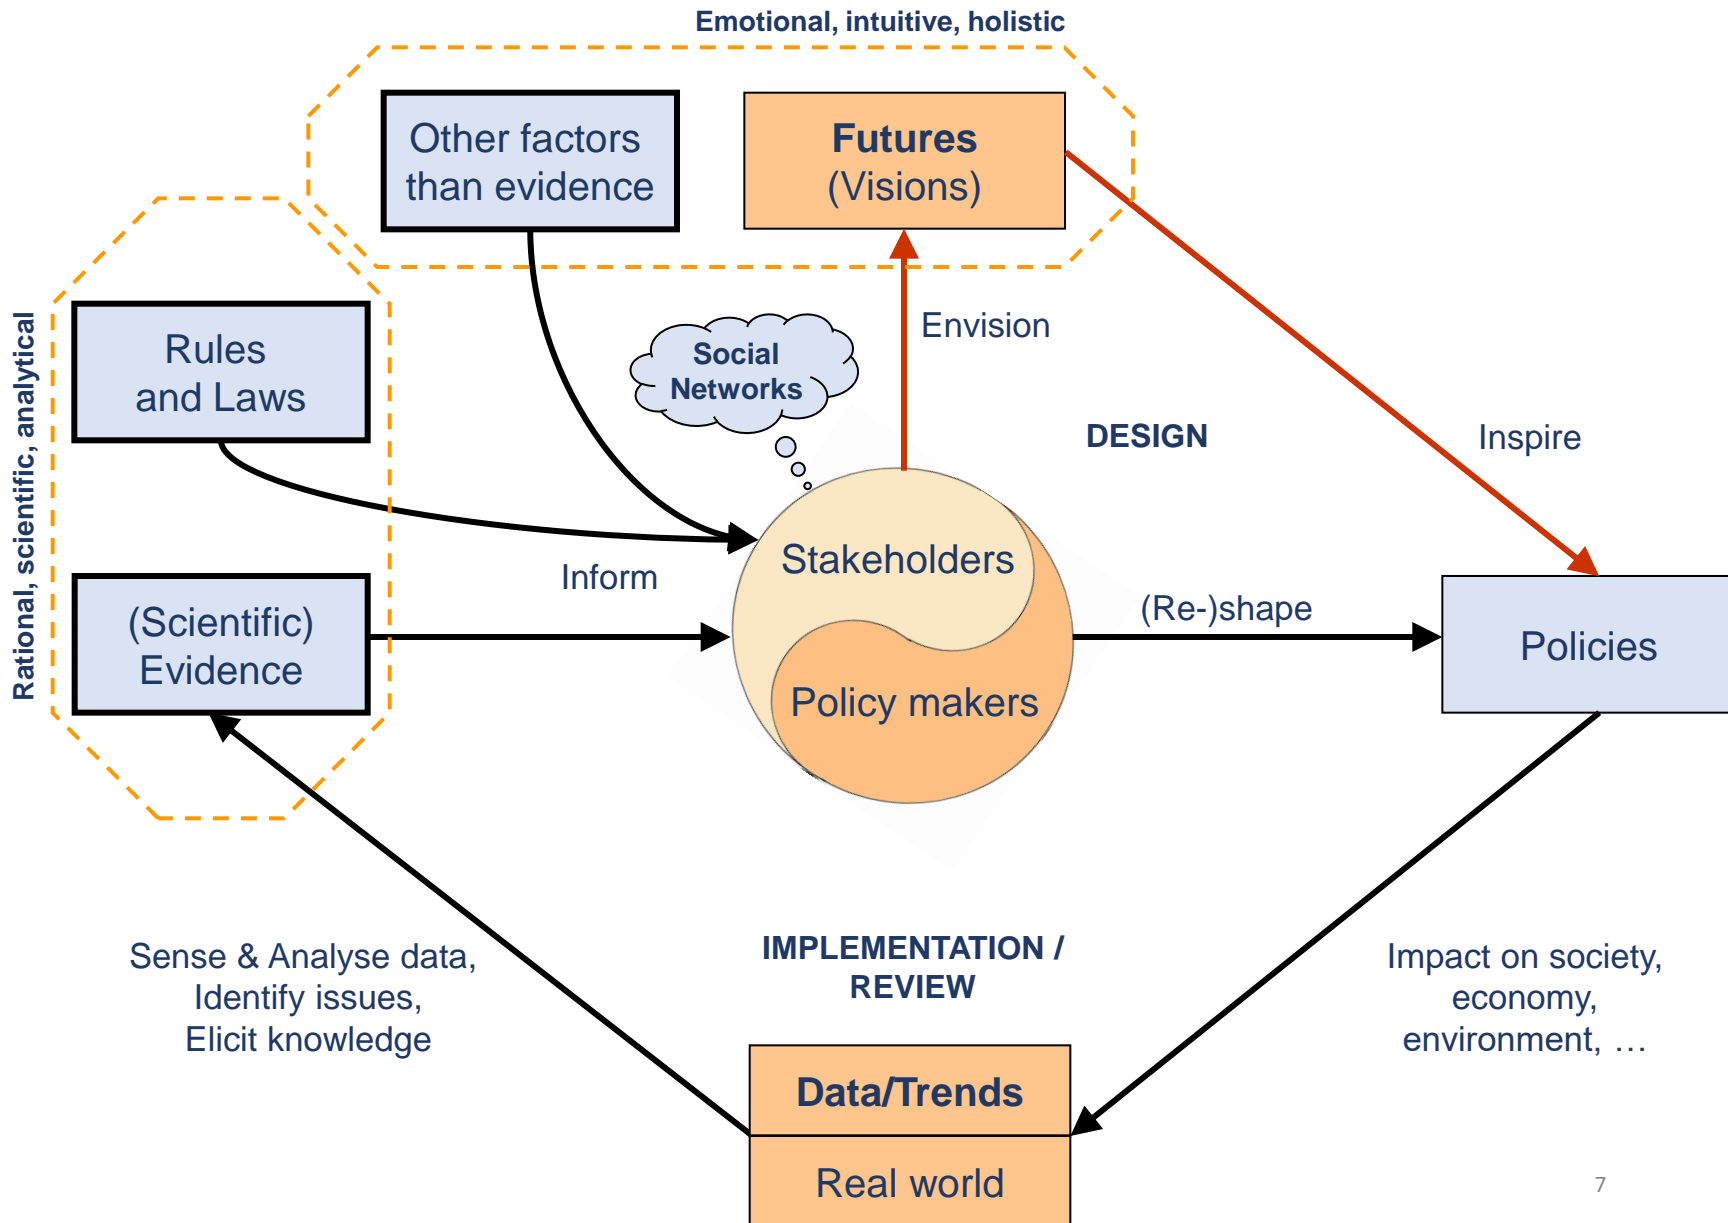

30+ departments, thousands of consultations, (growing every month), millions of respondents (e.g.: FutureCAP: 63.000)

How to make sense of the community's inputs ?

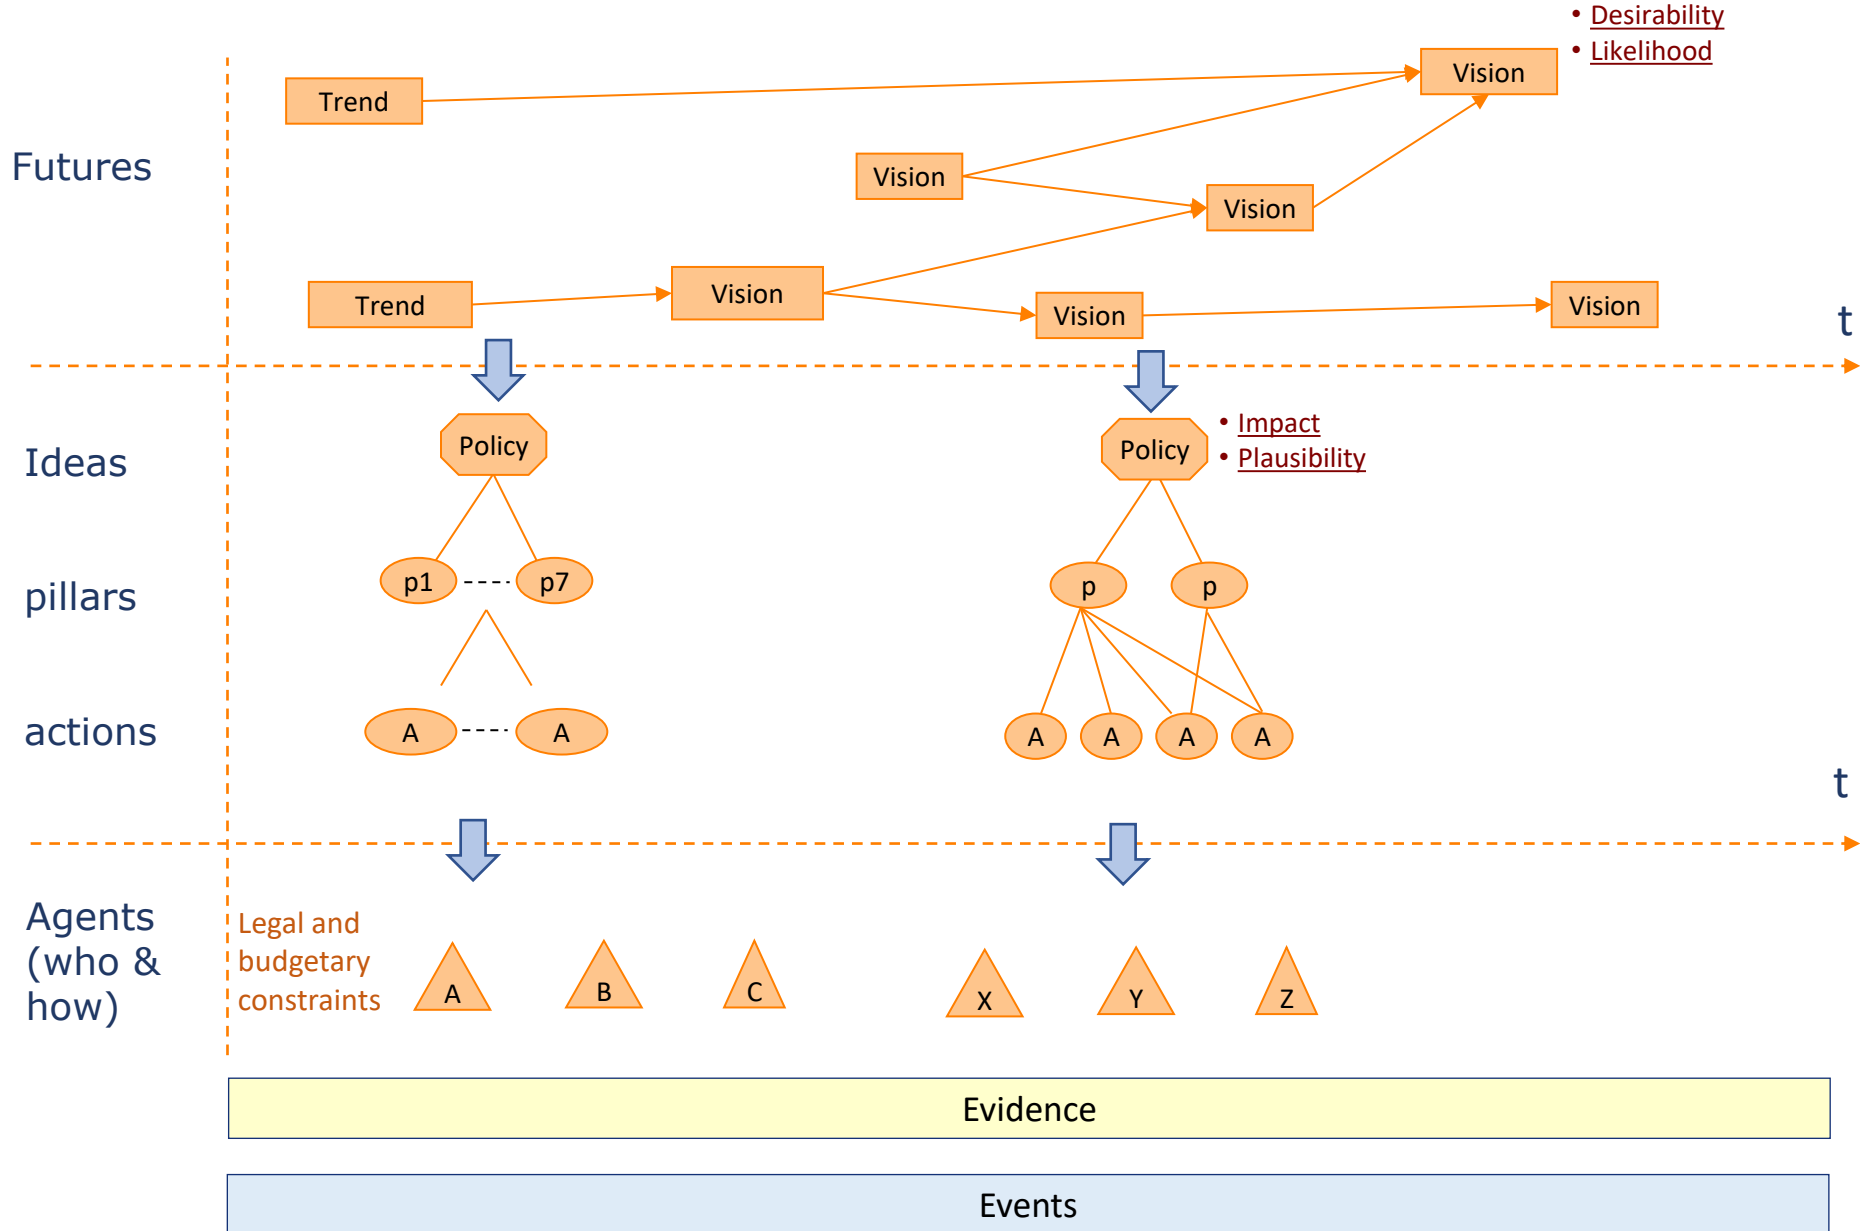

Can LLMs and GPTs solutions help?

# Policy making – combining evidence with participation

# Policy making semantic model

# AI technologies transforming public services...

# AI as transformational force

Has the potential to **automate repetitive time-consuming tasks**, coupled with **large-scale document analysis** and **skill augmentation**, will allow staff to gain efficiency and enable them to concentrate on more strategic, creative, and value-added assignments that require critical thinking, problem solving and relationship building.

How to best **avoid a Neo-Taylorism** approach?

Taylorism: method of industrial management designed to increase efficiency and productivity by splitting and optimising work processes, often associated to meaningless work because employees are simply treated as machines.

How to **avoid deskilling** of workers?

Quantity versus **quality**? Scanning versus **understanding**?

**Energy consumption** – can AI become greener?

# Potential Use Cases @ EC

- Enhancing document summarization capabilities,
- Streamlining the preparation of briefings and responses to questions,
- Introducing a conversational platform that supports non-classified human-like dialogues, and
- Providing generative AI services to leverage the vast data, information and knowledge base that the administration has across various business areas.

**Trustworthy AI technologies as required  
by the AI Act**

C(2024) 380 final

# Examples of AI systems already in service

- [eTranslation](#) and [eSummary](#): AI-powered language services that provide automated translation and summaries in the 24 official languages of the Union and other geopolitically or socioeconomically relevant languages.
- [eBriefing](#): AI-based service to assist in drafting official briefings for EU Staff, but also for anyone who needs a general briefing on given topics in a similar format. Users can upload a series of documents on the subject in question and get back a briefing in the EU Institutions' format.
- [Publio](#): AI-powered service for supporting users in their discovery of EU law and EU publications, thus also contributing to greater accessibility.
- [Doris+](#) (**Data Oriented Services**) **drive-in**: provides sentiment analysis, keyword extraction, summarisation, and named-entity recognition to semi-automatically analysis in any type and document. There is also specific dashboard for public consultations answers (Doris public consultation dashboard).
- [SeTA \(Semantic Text Analyser\)](#): applications built on SeTA are successfully in use for metadata creation, document classification and discovery. SeTA is being tested for other use cases.

# AI systems made available outside EC

## eTranslation

Neural machine translation built on the EU's history of professional translation.

## eBriefing

Generate reports from sets of documents in official or general styles.

## eSummary

Quickly find out the main content of long documents.

## Multilingual Post

Short translations in multiple languages in one shot for X.

## Speech-to-Text

Upload your media and get full transcriptions or subtitles back.

## Natural Language Processing Tools (NLP)

Anonymisation, Classification and Named-Entity Recognition.

[AI-based multilingual services](#)

# Group Assignments

# Group Assignments

To look into AI tools' impact on work-related skills, expectations & understanding of the objectives and tasks of a public servant. **We invite you to carry out experiments...**this is not a tutorial on eBriefing/eTranslation.

Use the [AI-based multilingual services](#). ([Registration](#) needed) If needed, you may also use other **trustworthy AI tools**.

**Groups of 3-4 students select one of the following use cases:**

A) Draft a reply in German, Portuguese, French or Spanish to a citizen complaint about the spending on a research funding programme: use input documents from:

<https://www.ombudsman.europa.eu/en/decision/en/190664>

B) Draft an overview or summary of a first version of a new European law clarifying and enforcing the GDPR in the context of generative AI platforms: use input from:

<https://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:32016R0679> and [https://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=OJ:L\\_202401689](https://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=OJ:L_202401689)

# Group Assignments (cont.)

C) Summarise the AI Act to explain its main purpose to a general audience. Use input from: [https://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=OJ:L\\_202401689](https://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=OJ:L_202401689)

D) Draft an overview of the citizens' answers received in a public consultation. Use input from: [https://ec.europa.eu/info/law/better-regulation/have-your-say/initiatives/12633-End-of-life-vehicles-revision-of-EU-rules/feedback\\_en?p\\_id=10408301](https://ec.europa.eu/info/law/better-regulation/have-your-say/initiatives/12633-End-of-life-vehicles-revision-of-EU-rules/feedback_en?p_id=10408301)

E) Reply to journalists' questions /an expert audience about the tasks of the European AI office. Use input from: <https://digital-strategy.ec.europa.eu/en/policies/ai-office#ecl-inpage-tasks-of-the-ai-office>

F) Given the results of a recent [consultation on the White Paper “How to master Europe's digital infrastructure needs?”](#) and the forthcoming evaluation of the [European Electronic Communication Code Directive](#), identify 5-10 actions (policies, regulations, investments) that the future legislative framework on Electronic Communications should address.

# Group Assignments (cont.)

H) Check the correctness of the information and identify potential mistakes or misleading statements in an AI-generated text. Use input from [https://ec.europa.eu/echo/files/funding/hip2024/echo\\_hf\\_bud\\_2024\\_91000\\_v1.pdf](https://ec.europa.eu/echo/files/funding/hip2024/echo_hf_bud_2024_91000_v1.pdf) and document provided by email.

## Consider questions such as:

- How do you perform your tasks? What tools did you use?
- What opportunities and risks do you see? What really helps your work and what causes negative stress for you? Who may benefit?
- When the focus is put on reviewing instead of drafting, how does it change the nature of your work and the skills needed?
- Is slow thinking (logical reasoning) still necessary and possible?
- How to ensure quality and reliability?
- What about human intelligence?

**Rooms:** FAV01 (here), FAV03 / Zemanek, Gödel, Seminarraum (1st floor)
