# I ♥ Free Software

ilovefs.org

The modern definition defines free software by whether or not the recipient has the following four freedoms:[8]

- The freedom to run the program as you wish, for any purpose (freedom 0).
- The freedom to study how the program works, and change it so it does your computing as you wish (freedom 1). Access to the source code is a precondition for this.
- The freedom to redistribute copies so you can help your neighbor (freedom 2).
- The freedom to distribute copies of your modified versions to others (freedom 3). By doing this you can give the whole community a chance to benefit from your changes. Access to the source code is a precondition for this.

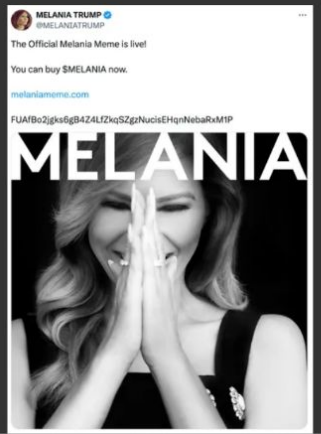
## Melania Trump launches a memecoin of her own, tanking her husband's in the process

Before people had a chance to process the fact that the incoming president of the United States had just launched his own transparent crypto cash-grab, the soon-to-be First Lady did the same. Whoever is calling the Trump family's crypto shots seemed to think they could just follow the same playbook a second time and enjoy the same results, but the launch of the new token brought a sudden crash in the $TRUMP token value.



This is not Melania Trump's first foray into the crypto world. In December 2021, she launched her own

“On display? I eventually had to go down to the cellar to find them.”
“That’s the display department.”
“With a flashlight.”
“Ah, well, the lights had probably gone.”
“So had the stairs.”
“But look, you found the notice, didn’t you?”
“Yes,” said Arthur, “yes I did. It was on display in the bottom of a locked filing cabinet stuck in a disused lavatory with a sign on the door saying ‘Beware of the Leopard.”

**Mittel sind keine Ziele.**

Und viele unserer Mittel enthalten gar nicht unbedingt die Werte, die wir wollen.

Indeed, many of the most important examples of technologies that have political consequences are those that transcend the simple categories of "intended" and "unintended" altogether. These are instances in which the very process of technical development is so thoroughly biased in a particular direction that it regularly produces results counted as wonderful breakthroughs by some social interests and crushing setbacks by others. In such cases it is neither correct nor insightful to say, "Someone intended to do somebody else harm." Rather, one must say that the technological deck has been stacked long in advance to favor certain social interests, and that some people were bound to receive a better hand than others.
